# Start using passkeys with NordPass

The passwordless future is here: With passkeys, enjoy a safer and more convenient way to secure and access your online accounts.

Check plans

# From passwords to passkeys

Meet the technology that will reshape our approach to cybersecurity.

## Facing password limitations

**Security breaches.** Up to 86% of all basic web application attacks use stolen credentials for initial access.

**Memory overload.** The average user has around 100 passwords.

**Business loss.** Cybercrime will cost companies worldwide an estimated \$10.5 trillion annually by 2025, up from \$3 trillion in 2015. At a growth rate of 15%, year-on-year.

# Passkeys — the new standard

**The future is here. Are you ready?**

Passkeys are the answer to the age-old password dilemma. Forget about memorization or the fear of choosing vulnerable passwords. Passkeys offer a new, more secure, and seamless way to log in to your accounts whether at home or at work.

## Passkeys vs passwords: What's the difference?

Here's why passkeys are a more advanced solution compared to passwords

### Passkeys

- ✓ **Strong** by default, ensuring robust security

### Passwords

- ✗ Vary in strength, potentially leaving accounts **vulnerable**.

- ✓ **Eliminate the need to create complex strings of characters** or commit them to memory
- ✓ **Are unique per-service**, preventing the risk of reuse across multiple accounts
- ✓ The private key associated with passkeys **remains confidential**, enhancing security
- ✓ Offer **high resistance to phishing**, brute-force attacks, and other cyber threats

- ✗ **Have to be memorized** or securely stored to prevent unauthorized access
- ✗ Can be reused **across different apps or websites**, posing security risks if compromised
- ✗ Are shared with apps and websites, **increasing the likelihood of interception**
- ✗ Can be **susceptible to phishing attacks**, compromising account security

## How do passkeys work?

Passkeys are a replacement for passwords based on FIDO standards. Passkey technology combines biometric verification with cryptographic keys, offering a safer and more convenient alternative to passwords.
