# Saving and filling passkeys

Save and use passkeys with 1Password in the browser

Watch on YouTube

[Passkeys](#) are an easier and more secure alternative to passwords. You can use 1Password to save the passkeys you create for your accounts and sign in to websites with passkeys in your browser.

Because passkeys saved in 1Password are like any other items, you can also view, edit, move, and even [share them with other people](#).

## We use cookies

We use first and third party cookies to enhance your experience, provide personalized content or ads, and analyze website traffic. To learn more, please visit our [Privacy Notice](#).

[See Our Privacy Notice](#)

Save a passkey

To save a passkey, find an existing login that now supports passkeys using [Watchtower](#) or create a new account on a [passkey-supported website](#). [🔗](#) Depending on the website, you may need to [create an account with a username and password](#) before you can create a passkey.

When you choose the option to create a passkey, 1Password will offer to save it. If you have an existing Login item for the website saved in 1Password, you can choose to update it by adding the passkey. Or you can save the passkey as a new item.

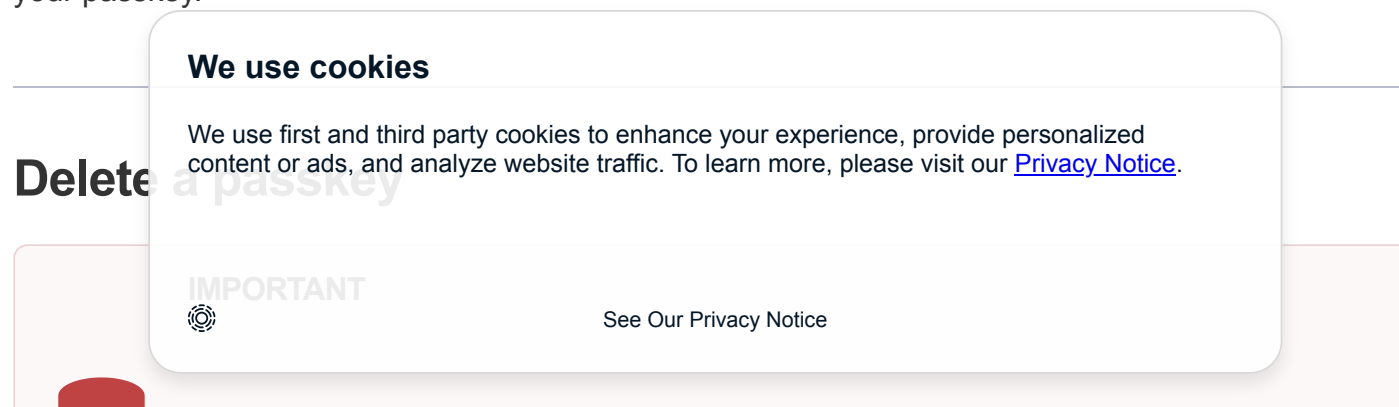

## Sign in to a website with a passkey

After you've saved your passkey for a website, 1Password can use it to sign in for you.

Sign out of the website, then follow the steps to sign back in using a passkey. When you see the list of your passkeys saved in 1Password, click **Sign in** beside the one you want to use.

You may need to select  in the username field and choose the Login item that contains your passkey.

Deleting a passkey saved in 1Password won't remove it from your account on a website or service. Make sure to follow the appropriate steps to remove a passkey on a website when you delete it in 1Password.

To delete a passkey:

- 1 Find the Login item for the passkey in 1Password and click or tap **Edit**.
- 2 Click or tap  beside the passkey field, then click or tap **Save**.  
If your Login item doesn't contain a password, you can delete the item instead.

## Get help

If 1Password doesn't offer to save your passkey on a supported website, [contact 1Password Support](#) and include a link to the website where you're trying to save a passkey.

If you need to use a [security key](#) or your browser's built-in passkey manager on a website when 1Password offers to sign in with a passkey, click the  button to use your security key or browser's passkey manager instead.

Passkeys saved in 1Password can't be exported at this time. If you choose to [export your 1Password data](#), make sure to also follow the steps to create new passkeys on each website where you saved a passkey in 1Password. Then save the new passkeys in a different location, like in your browser's built-in passkey manager.

### We use cookies

We use first and third party cookies to enhance your experience, provide personalized content or ads, and analyze website traffic. To learn more, please visit our [Privacy Notice](#).

If you don't want to use 1Password to save or sign in with passkeys, you can turn this feature off:

- 1 Open and unlock 1Password in your browser.
- 2 Click  and choose **Settings**.  
[See Our Privacy Notice](#)

- 3 Select **Autofill and save**, then turn off **Offer to save and sign in with passkeys**.
