Sign in with passkeys on Apple Vision Pro

You can create and save passkeys to replace the passwords you use to sign in to supported apps and websites on your Apple Vision Pro.

Passkeys are more secure than passwords, because they're uniquely generated for every account by your own device, and are less vulnerable to phishing. And they work on all your devices that are signed in to the same Apple ID.

Like passwords, passkeys are encrypted and stored in your iCloud Keychain, where they aren't visible to anyone (including Apple).

Note: To use passkeys, iCloud Keychain and two-factor authentication must be turned on.

Save a passkey for an account

Depending on the website, browser, or app, saving a passkey to your Apple Vision Pro and iCloud Keychain usually consists of steps similar to these.

1. On your Apple Vision Pro, do one of the following:

   - *For a new account:* On the account sign-up screen, enter an account name.

- *For an existing account:* Sign in with your password, then go to the account management screen.

2. When you see the option to save a passkey for the account, tap Continue.

   Your passkey is saved.

Note: If you want to save your credentials to an external security key or to a different device not associated with your Apple ID, you may be able to select Other Options, Save on Another Device, or similar (instead of Continue). Then follow the instructions.

Sign in to an account on your Apple Vision Pro with a passkey

Depending on the website, browser, or app, signing in with your passkey usually consists of steps similar to these.

1. On the sign-in screen for the website or app, tap the account name field.

2. Tap the account suggested at the bottom of the window.

   Optic ID verifies your identity.
